

The Smarter Way To Milk in a Parallel Stall

DAIRYSMARTER!

**The Slender
Hose Tree**

Patent Pending

The Slender Hose Tree

Features and Benefits:

Supports best milking practices by:

Promotes **less squawking** and the potential cross contamination that results from squawking.

Promotes **fewer milker unit fall-offs** and the potential contamination from coming in contact with parlor debris.

Promotes **complete and quicker milkout** by allowing the operator to properly position the unit.

Promotes **hose support use** with quick, effortless adjustment and an easy to use design.

Features and Benefits:

Most versatile 3-way (**up & Down, In & Out, Side to side**) Hose Adjustment Device on the market today allows the parlor milking technician to effortlessly adjust the milk hose position.

Features and Benefits:

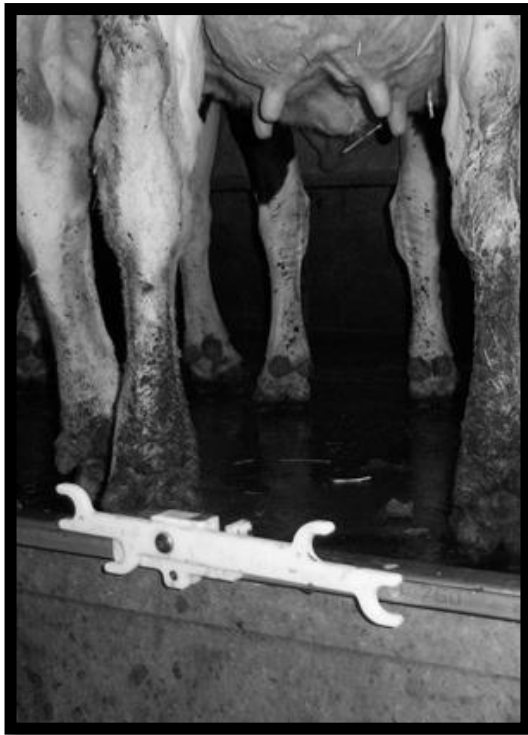

- **Easy to use** - Quick and effortless adjustment.
- Operator **access to the cow** is maximized.
- **Three Way hose adjustment.** (Up & Down, In & Out, Side to Side)
- **Robust design.**
- Supports **best milking practices.**

Features and Benefits:

Easy to use design. Primary adjustment is accomplished by placing the milk hose in the proper branch of the Slender Hose Tree. Side to side adjustment is made by simply pushing the Slender Hose Tree in the appropriate direction.

Operator access to the cow is maximized by *lightweight, sleek, slender design*. When prepping the cow, the Slender Hose Tree can be layed level or moved to one side of the stall

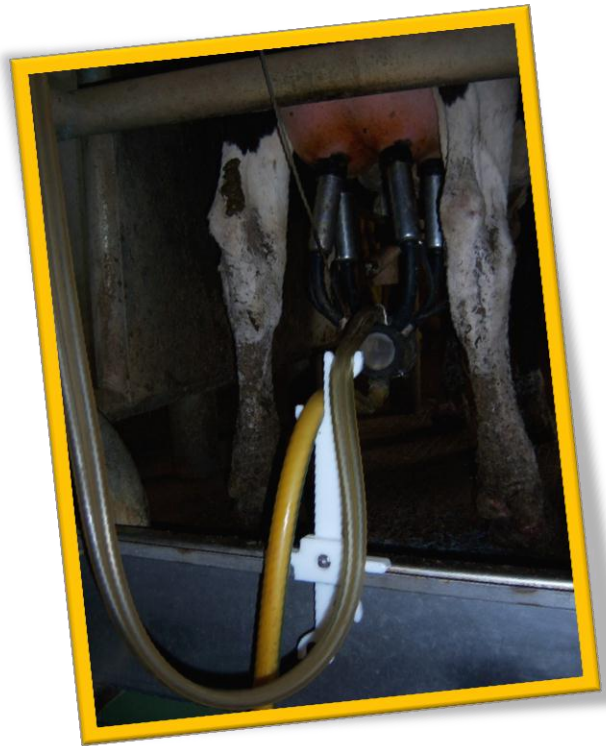

Features and Benefits:

- 1. **Milk hose disengages** from the Slender Hose Tree when the milker unit is retracted by the ACR.
- 2. **Efficient parlor operation** can be optimized when ACR drop down feature is used. *
- 3. Multiple branches allow for a place to **guide the pulsation hose**. This keeps the pulsation hose cleaner and reduces unit fall off.
- 4. Sleek design allows for **easy clean up**. Simply hose down during routine parlor wash up.
- 5. The Slender Hose Tree can easily **accommodate any hose size** - traditional milking claws though new high capacity milking claws.

* Ask your Dairy Equipment Dealer if your ACR (Automatic Cluster Remover) has a drop down feature.

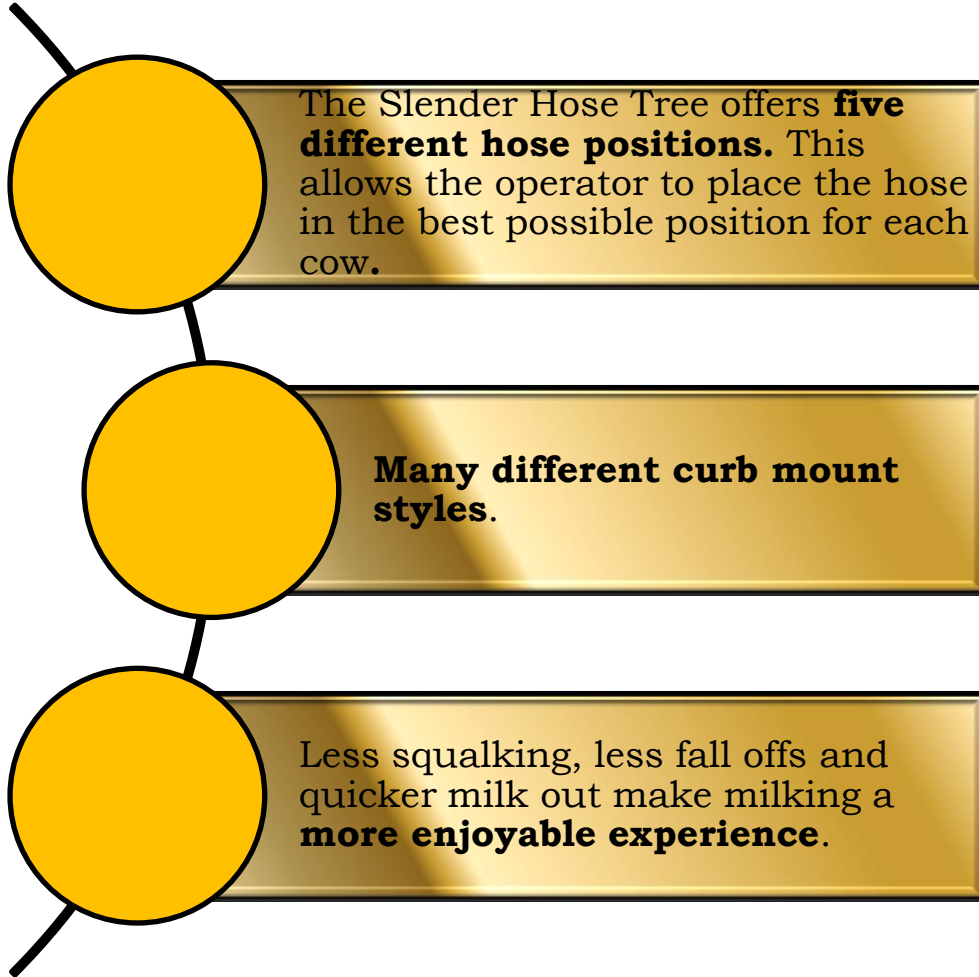

Features and Benefits:**High Udder Heifer**

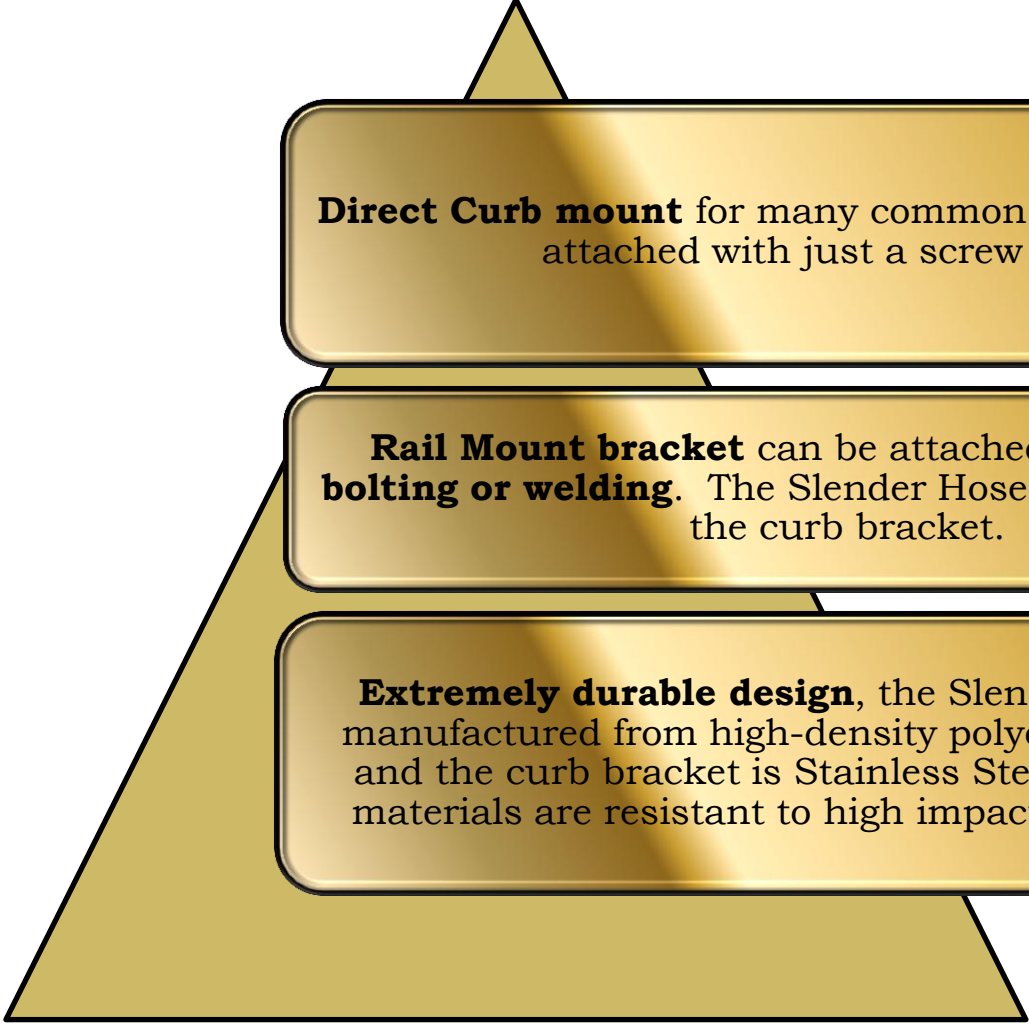

The high udder heifer milks out flawlessly when the milk hose is held at the proper height.

The unit is held on the high heifer while she is dancing and moving.

Features and Benefits:

Features and Benefits:

Direct Curb mount for many common curb types. Easily attached with just a screw driver.

Rail Mount bracket can be attached to any curb by **bolting or welding**. The Slender Hose Tree is secured on the curb bracket.

Extremely durable design, the Slender Hose Tree is manufactured from high-density polyethylene (HDPE*) and the curb bracket is Stainless Steel. Both of these materials are resistant to high impact and chemicals.

*HDPE is commonly used in shipping pallets and bed liners.

Mission Statement: DairySmarter is a **dairy focused business**. We are devoted to pioneering smarter ways to improve the health and well being of today's dairy farm.

Glenn Gingrich and Suzanne Lane formed a partnership to create new solutions to everyday problems found on the dairy farm.

Glenn owned/operated a dairy farm, and worked in a dealership selling and installing dairy equipment.

Suzanne has milked cows and worked for a local dairy equipment dealership.

Glenn and Suzanne both worked for a major dairy equipment manufacturer. They are driven by their strong faith in God and their love of cows.
